1. This Office Action is in response to applicant's amendment received on 5 August 2004.
2. The following is an examiner's statement of reasons for allowance:

The applicants' arguments are persuasive. In particular, the interconnections of claim 1 (figure 4) does not permit further reduction as taught by Gersho (figure 12.25) but instead, requires the reduced input to be sent to the "quantizer". The prior art (Gersho) teaches that it is better to quantize the vector first and then reduce the input in combination with the resultant quantization, which would permit further reductions in a hierarchical fashion.

The arguments regarding claim 3 (figure 3) is similarly persuasive because the "second stage quantizer" does not perform further reduction in the traditional sense as taught by the prior art. Instead the second stage quantizer relies on a codebook, which is not pre-computed but is determined in real time as a reduction of the initial codebook (i.e. – a traditional single codebook). Thus, instead of dividing a large codebook into multiple codebooks as is traditionally done, a single "reference table" (which is essentially a single codebook) is searched to select a subset which then becomes the codebook utilized by the "second-stage quantizer".

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
